This success reflects the strength of the nation's innovation system in comp

Physics and Industrial Development: Bridging the Gap. Not surprisingly, given its long-term potential, a number of countries have identified information technology as a crucial infrastructure need for national development. Teachers take on the role of coaches, students learn at their own pace, technology tracks student progress, and schools are judged based on the outcomes they produce.

This represented the first time in recent years when non-Americans had garn programs explicitly link new immigration with concrete economic investment. This estimate was calculated from data contained in the biennial report, National Science Foundation, Research and Development in Industry.
