Structures, or, why things don't fall down J. E Gordon

What are structures? A structure is a collection of materials intended to sustain loads. Structures occur in nature as well as in the man-made world. Biological.

Structures: Or Why Things Don't Fall Down - AbeBooks - J. E. Gordon:

Holy cow, 'Structures: Or Why Things Don't Fall Down' by J. E. Gordon was fantastic. It started out as a good read, but the ending took it to a.

In netted toils he takesThe Subtle One. He tested a variety of objects made from various materials and having various geometrical forms, such as springs and wires and beams. Light aircraft, which have to be designed for bad landings on rough ground, often have their undercarriages sprung by means of rubber cords which have a strain energy capacity much better than that of steel springs, and are also better than tendon, though they are less durable.

What these people did waste makes something very much like what had been made. Not only the thickness, but also the composition of each load-carrying component is determined, to a considerable extent, by the use which is actually made of it and by the forces which it has to resist during life. Indeed it is only when the subject is stripped of its mathematics that one begins to realize how difficult it is to pin down and describe those structural concepts which are often called 'elementary'; by which I suppose we mean 'basic' or 'fundamental'.

May09, Simon Bostock rated it really liked it Shelves: the-team. What comes out of recent theory is that, whether a structure is subjected to a sudden blow or to a steady load, tensile fracture depends chiefly upon: 1.
