Wind energy offers many advantages, which explains why it's one of the fastest-growing energy sources in the world. Solar thermal systems, concentrating solar power CSP Solar thermal systems need sunlight rather than the more diffuse light which can be harnessed by solar PV.

Forexample, fatalities probably have greater detrimental effects on bat and birds. The net effect of this is growing losses as wind capacity expands. Wind turbines when isolated from the electric grid produce negligible amounts of carbon dioxide carbon monoxide sulfur dioxide nitrogen dioxide mercury and radioactive waste when in operation, unlike fossil fuel sources and nuclear energy station fuel production, respectively. Wind creates jobs. Additional research is needed to help assess the immediate and long-term impacts of wind-energy facilities on threatened, endangered, and other species at risk.
